

Azola Jokweni

Information Technology & Media

A creator who builds both code and stories. I blend the logic of software development with the insight of media and communication, I turn ideas into functional digital products and meaningful content. With experience from app and web development to journalism and research, I solve problems, simplify complexity, and design solutions that people can actually use. I bring curiosity, adaptability, and a creative edge to every project I work on, whether it's on a screen, in a system, or on a page.
